

MINUTES OF MEETING WITH ALLIED AMPHENOL PRODUCTS
ON APRIL 26, 1985 AT 1:00 P.M.

Attendees:	Jim Janssen	IEPA/DLPC
	Jeff Hosler	IT Corporation - consultant for Allied
	Burt Fleischer	Amphenol Products
	L. W. Eastep	IEPA/Permits
	Mary E. Dinkel	IEPA/DLPC
	Scott Phillips	IEPA/Enforcement

Amphenol Products, which was acquired by Allied in 1979, is located in Broadview, Illinois. Amphenol is in the business of manufacturing connectors which includes a plating operation process. The site was the subject of a Disclosure Document investigation performed by IT Corporation at the request of Allied.

The investigation revealed groundwater contamination in and around the site. Messrs. Fleischer and Hosler contacted the IEPA for the purpose of discussing further studies and possible voluntary cleanup of the site, using the services of IT Corporation.

A preliminary assessment (Phase I) of the site involved soil borings and on-site well installation with detection of one or more volatile organic compounds and heavy metals (TCE, Trans-1,2-dichloroethylene, copper, nickel and cyanide) in the groundwater at various locations. The source of the contamination was discussed as probably resulting from minor spills occurring during past production processes.

A Phase II remedial investigation plan was discussed which will include the drilling of additional monitoring wells to determine the extent of the contamination and propose remedial action which may be required.

Jim Janssen discussed the IEPA involvement with a remedial investigation at the site indicating the Phase II would be monitored by the Agency on a limited basis.

IT representative, Jeff Hosler, informed Jim Janssen that he would make the necessary contacts prior to beginning Phase II.

The results of the Phase II work will be discussed with the IEPA before additional actions are taken.
